

Want To Reduce Your Home Heating Costs?

Brooksville has received a grant from Efficiency Maine Trust to jump start home weatherization efforts that can reduce the cost of heating your home.

Offered to ALL residents of Brooksville, the program has three major efforts: (1) Taking a special “thermal-IR” picture of the outside of your home which provides critical information about where you are experiencing the most heat loss and thus where to focus weatherization efforts;

(2) Ten homes will receive a full “energy audit” providing a detailed assessment of the most effective ways to weatherize your home; and

(3) Five homes will receive a full home weatherization program.

All who sign up will receive a report concerning the information gained from the thermal images and provided options on how you might proceed with your home weatherization efforts.

Home weatherization is the best, most effective way to reduce the cost of heating your home. Weatherization projects have been shown to reduce the cost of heating a home by 20-30%, a significant savings given that the average Maine home uses 1,000 gal. of home heating oil each year. You could save \$500.00 or more each year on your heating cost after completing a home weatherization program.

To be part of this Brooksville community effort, **all you need to do is “sign up” with the Town Office – provide your name, street address and phone number.** We have begun to take “thermal-IR” pictures; we have the capacity to take 100 more thermal pictures with this program. **Sign up now, this is a free service for all Brooksville residents.**

Call, 326-4518, or visit the Town Office to sign up – this is a free program available to ALL residents of Brooksville
